USEFUL HINTS.

THE expressed juice of green walnut shells diluted with water is used for dying blonde hair a light brown.

to the water with which floors are washed will prevent the ravages of

Use kerosene, or beth-brick, or powdered lime to scour iron, tin or copper; wash in hot sads and polish with dry whiting.

To REMOVE spots from furniture, four ounces of vinegar, two ounces of sweet oil, one onnce of turpentine. Mix and apply with a flannel cioth.

Various materials may be advantageously covered with rubber enamel, iron thus being protected from rust, glass and crockery from breaking, and wood rendered stronger and more ornamental, The enoutchouc material is applied in a plastic state to the foundation material, after which the whole article is submitted to a high degree of heat, the materials being thus firmly united and the enamelled surface obtained.

TAKE half a pound of the best ground coffee, put it into a saucepan containing three pints of water, and boil it down to one pint; boil the liquid, put it into another saucepan, well scoured, and boil it again. As it boils, add white sugar enough to give the consistency of sirup; take it from the fire, and when it is cool put into a bottle and seal. When trayeling, if you wish a cup of good coffee, put two teaspoons of the sirap in an ordinary cap and pour boiling water upon it and it is ready for use.

MACABONI makes an excellent variety in the scarcity of vegetables, and should be much better known and more used by the masses here. It is the staple food of the common people in Italy, indeed, of most classes. It is made of strongly glutinous wheat flour, hence is flesh forming, while its starch supplies heat. It may be cooked tender in boiling water, seasoned with salt, and eaten with or even without cream sauce, or milk or butter. After boiling it can be put in a pudding dish, with about a quarter its weight of grated choese sprinkled over it and lightly baked, The addition of this cheese makes this diet about equal to lean meat as a flesh-

A goop, respectable-looking husk mat, says a writer in the Household, is not an unsightly object, and I wish every housekeeper knew shat a world of scrubbing and wiping of floors they saved, that they might have one. One bushel basket and a boiler full of husks is sufficient to braid a large mat. If you have been or girls, it will be just fun for them to braid one in the evening : but if, like myself, you have neither, it would pay you to take the time and do it yourself. Have ready a tea kettle full of hot water, and tern on to the boiler of huses. Begin a common threestrand brail, and as you bring over a strand place about three husks on, leaving the large ends of the husks up. When enough is braided for a mat, sew firmly with twine in any shape you sprinkle warm water on upper side. Rus a fork through the busks, splitting the ends into latte, early libers; then with the shears tran off evenly. This can be done in ose evening by a good worker. I braid enough in the fall to last me the year round.

" Live and Let Live."

After a young man has been employed for years by a business firm, or in the laborious work of the farm, commencing, perhaps, at the very lowest round of the ladder, and by diligence, faithfulness and a watchful regard for his employer s should, as the sayi g is, "branch out for there are many instances of this kind, there are also many where the reverse of himself, is the subject of engenerous and unjust crisicism, because he comes into henorable competition with his em-

The world is large enough for all, and Faur's cell, which the physician can no one man, or set of men, can possibly readily carry with him in his tuggy, is have a morigage upon any branch of business, or monopolize all the chanches | nosis. for conducting an honorable calling, whether it be in publishing a newspaper or se ling penduts. What do we dequire a knowledge of business for? Why are some of the best years of our lives passed in the employ of others, except to edn- must be thwarted and conteracted in cete us so that we may be capable, some day, of assuming charge ourselves, and fitting us to take the place of those whose active hise must sooner or later be brought to a cose? "Live and let live." and when, by the ail of those who have labored long and earnestly for you, a sheeked; he is put in leading-strings, he competency has been secured, and you is carefully guarded from the outdoor have a full share of this world's goods, do not be a sordid, mean and unmanly as to throw obstacles in the way of the success of the young man who was once in your employ. Gave the boys a chance.

Mica Masks.

A well-known German manufacturer of mica war s, Herr Raphael, of Breelau, now makes mica masks for the face. which are quite transmarent, very light, and a edted neith r by heat ner by, neids. They offord good protection to all workin a who are liable to be it jured by heat, dust, or noxious vapors, all workers with fire, ustal and glass moltersetone-masons, etc. in a lkinds of grinding and po ishing work the flying fragments rebound from the srehed mica plates of the mask without injuring them. These plates are fixed in a methe frame, high is well i-olated by means of abotea, so as not to be attack d by heat or acid. These masks allow the turning of the eye in any direction, and, as against micasp etacles, they afford the advantage of protection to the whole fa e. In certain cases the neck and shoulders may also be guarded by a sheet of cloth impregnated with fire proof material, or by asbestos ing greatly from Coald and Conghs, this good sheet attached to the mask. The interval between the mica and the eyes Cough Syrup for them, and now the sentrics allows of workmen who have poor eye- are happy.

ght wearing spectacles, and of workers un fice or in melting operations wearing colore I glass spectacles under the mask with o t fear of breakage of the ass, mica being such a bad conductor A LITTLE spirits of turpentine added of heat. Where the mask has to be worn long, it is found desirable to add a caoutchone tube with mouth-piece for admission of fresh air; the tube passes out to the shoulders, where its funnelshaped end (sometimes holding a moist-ened sponge) is supported. The mask not tackle any kind of business enterhas a sort of cap attached to it for fixture on the head .- London Times.

A Wise Dencon.

"Deacon Wilder, I want you to tell me how you kept yourself and family well the past season, when all the rest of us have been sick so much and have had the doctors visiting us so

Bro. Taylor, the answer is very easy. used Hop Bitters in time; kept my family well and saved the doctors' bills. Three dollars' worth of it kept us well and able to work all the time. I'll warrant it has cost you and the neighbors one to two hundred dollars apiece to keep sick the same time."

"Deacon, I'll use your medicine hereafter."

Apparatus by Which the Interior of a

Man's Stomach can be Viewed. Physicians have long been in possession of instruments-commonly small

mirrors-designed to assist them in getting a look at the interior parts of the human body, such as the back part of the month, the throat, the inner car, etc. The dentist's mirror perchelion, a flexible joint, is familiar to all. But it has long been desirable to penetrate to the stomach of a patient afflicted with gastrie troubles and see by actual inspection what is its condition. Thus may often be gained during the life of a man the valuable information obtained at present by post-mortem examination for the mortuary report, and what has hitherto served too late to gratify the curiosity of the doctor may go to saving the life of his patient-in a word, the means to diagnose the condition of the stomach by sight rather than guessing, has long been wanted, and Herr Leiter, of Vienna, has patented an instrument designed to supply the want. The gastroscope, says an exchange, is an electric lantern and mirror combined, which, fixed upon the end of a flexible tube, is inserted bodily into the stomach, being passed down the throat of the patient with its equipment of wires for producing the electric light. The lantern is a small, hollow glass globe containing the plantinum coil which, when heated by a current of electricity, is to produce the illumination of the interior of the stomach. It is made double, so that no heat can be communicated to the stomach, and to make it the more sure, the space between the inner and outer globe is kept supplied with a current of cold water by means of two small India rubber tubes inclosed in the main tube. The tissues sive wife into an arrogant, self-reliant of the human body are comparatively woman. Yesterday I told her to go out translucent, and when the current of electricity is turned on the internal organization, it is said, becomes distinctly to go and grease it myself. I have alvisible. The experiment of illuminating ways been kind and thoughtful to her. the interior of fish has often been performed by amateur electricians, the the winter after firewood, my coat straight lines and simple structure of shielded her from the storm, while I sat the fish facilitating the introduction of alone in the cabin, through the long long, round or oval. Then the fish facilitating the introduction of the apparatus. What is really novel, therefore, in Herr Leiter's apparatus reremains to be described. It is the addition he makes of a series of mirrors and lenses by means of which the light coming from the illuminated stomach is sent | sions. She does not love me any more, back up the tube to which the lantern and life to me is only a hollow mockery, is attached, and, reaching the eve-piece outside the patient's body, is viewed by the surgeon. But a small portion of the surface of the stomach is thus brought into our view, it is true, but it is enough from which to make a diagnosis. If a broader field is decired to be covered it is done by revolving the lantern. By the agency of a little notched wheel with interests, has become a thorough master | teeth playing into a ring in the interior of the busicess, it is not strange that he of the tabe, the whole lower part or the apparatus may be revolved without the himself," and u itz the knowledge he necessity of withdrawing it for a new adhas acquired in his schooling for his own justment. Though but little known as advancement and benefit. And in this yet this instrument has been put, it is laudable undertaking it would seem as | said, to the test of practical use, and we though his late employers should deem | can searcely doubt that it will soon it a pleasu e, not to say duty, to help come to form a recognized part of the him, if not with an stantial financial aid, steck of instrument in the hands of with good wishes and the influence of every surgeon. Happily for Herr Leikind words and common tations. While ter's invention, its introduction into general use has been rendered possible by M. Faur's secondary battery for restorthis is practiced, and the late honest, ing electricity. Without the latter the capable, faithful employe, when he takes gastroscope could have but limited use, the responsibilities of business upon since to obtain the high degree of light required, a very strong galvanic battery would have been needed, and such a battery few physicians possess and care to bother with. As it is, one large

The Leading-Strings Fallace.

all that is needed for intro-gastric diag-

From the moment a child is born he is treated on the principle that all kis instincts are essentially wrong, that pature every possible way. He is strapped up in a contrivance that he would be glad to exchange for a straight jacket, kept for hours in a position that prevents him from moving any limb of his body. His first attempts at locomotion are world, from the air that would invigorate ties lungs, from the sponts that would develop his muscles. Hence the peevishness, awkanilness and sickliness of our young aristocrats. Poor people have no time to imitate the absordities of their wegithy neighbors and their children profit by what the model purse would undenbtedly call neglect. Indian babies are still bester off. They are fed on bullbeef and kicked around like young dogs; but they are not swaddled, they are not c adled and not dowed with passegorie; they crawl around naked and soon learn to keep out of the way; they are happy, they never cry. If we would treat our youngsters in the same way, only substituting kisses and bread for kicks and beef, they would be as happy as kids in a clever-field, and, moreover, they would afterward be hardier and stronger .-Popular Science Monthly.

THE assessed value of the property of the Chinese in California is estimated at \$1,500,000

THE King of Denmark is truly a paternal monarch. Finding that during the recent sovere weather the royal foot guards were sufferA Touching Story.

Calamity is the name of a man who lives at the gold camp of Cummins City. He has another name, but nobedy seems to know what it is. It has been torn off the wrappers someway, and so the boys call him Calamity. He is a man of singular mind and eccentric construc-The most noticeable feature about Calamity is his superstitious dread prise on Friday. Calamity is even more the victim of vague superstition, and has a dread of beginning work on any day of the week, for fear that some disaster should befall him.

Last spring he had a little domestic trouble, and his wife made complaints that Calamity had worn out an old longhandled shovel on her, trying to convince her about some abstruse theory of his. The testimony seemed rather against Calamity, and the miners told him that as soon as they got over the rush a little, and had the leisure, they would have to hang him. They hoped he would take advantage of the hurry of business and go away, because they did not want to hang him so early in the season. But Calamity did not go away. He stayed because it was easier to stay than to go. He did not, of course, pine for the notoriety of being the first man hung in the camp, but rather than pull up stakes and move away from a place where there are so many pleasant associations, he concluded to stay and meet death calmly, in whatever form it might

One evening, after the work of the day was done and the boys had eaten their suppers, one of them suggested that it would be a good time to hang Calamity. So they got things in shape and went down to the big Laramie bridge, Calamity was with them. They got things all ready for the exercises to begin, and then asked the victim if he had anything

He loosened the rope around his neck a little with one hand so that he could speak with more freedom, and holding

his pantaloons with the other, said: "Gentlemen of the convention, I call you to witness that this public demonstration toward me is entirely unsought on my part. I have never courted notoriety. Plugging along in comparative obscurity is good enough for me. This is the first time I have ever addressed an audience. That is why I am embarrassed and ill at ease. You have brought me here to hang me because I seemed harsh and severe with my wife. You have entered the hallowed presence of my home-life, and assumed the prerogative of subverting my household descipline. It is well. I do not care to live, so long as my authority is questioned. You have already changed my submisand grease the wagon, and she straightened up to her full height and told me When she had to go up into the guich in hours. I could name other instances of unselfishness on my part, but I will not take your time. She uses my smoking tobacco, and kicks my vertebre up into my hat on the most unlooked for occa-Death, with its wide waste of eternal calm and its shoreless sea of rest, is a glad selief to me. I go, but I leave in your midst a skittish and able-bodied woman, who will make Rome bowl. I bequeath her to this camp. She is yours, gentlemen. She is al I have to give, but in giving her to you I feel that my untimely death will always be looked upon in this gulch as a dire calamity. The day will come when you will look back upon this awful night and wish that I was alive again, but it will be too late. will be far away. My soul will be in a land where domestic infelicity and cold feet can never enter. Bury me at thefoot of Vinegar Hill, where the sagehen and the fuzzy bumblebee may gambol o'er my lowly grave."

When Calamity had finished, an impromptu caucus was held. When it was adjurued, Calamity went home to his cabin to surprise his wife. She has not yet fully recovered from

"ACCEPT OUR GRATITUDE."

Dr. R. V. Pierce, Baffalo, N. E .: Dear Sir-Your "Golden Medical Discovery" has cured my boy of a fever sore of two years standing. Piease accept our gratified. Yours truly, HENRY WHITING, Boston, Mass.

Wounds of the Heart.

It is generally supposed that wounds of the heart kill immediately, and a correspondent has sent to use a stag's heart with the left auricle practically annihilated and the upper half the left ventricle torn completely through by a bullet; so that three fingers can be readily passed through the wound into the cavity. Notwithstanding the extent of the injury, "the stag ran about sixty yards, the first tem yards up hill." The fact is that wounds of the heart are but seldom immediately fatal, if ever so. We know of no case of absolutely instantaneous death from a wound of the heart, in any part or however extensive. The experience in the battle-field corresponds with that of the sportsman, who never saw a deer shot through the heart that did not run some distance. Wounds of the apex kill comparatively slowly, in from one hour upward; and in one case men-tioned by John Bell, in which the apex was completely severed from the rest of the organ by a sword cut, the man lived twelve hours. Indeed, out of twenty-nine collected cases of injury to the heart, only two were fatal within fortyeight hours, and in the others death resulted in periods varying from four to twenty-eight days. Recovery may take place even when the wound is extensive, for a bullet has been found imbeded in the substance of the heart after a lapse of six years from the date of the injury, the patient having died from a disease of an organ in no way connected with the lesion. Some little time elapses before the blood wholly escapes from or fails to enter the cavities, and the walls continue to contract and propel some of it into the vessels for a much longer period than is usually thought to be the case.— Lancet.

When a man's wife dies, and the editor of the local paper prints an obiti-ary which wind up with the words,

"The young husband has met with a loss which can never be replaced," he may appreciate the soothing words at the time, but about a week after marrying his second wife he must have a very poor opinion of the prophesying powers

of the editor. - Norristown Herald. Dr. Prence's "Favorite Prescription" is not extended as a "cure-sil," but admirably familia a singleness of purpose, being a most potent specific in those chronic weaknesses peculiar to women. Particulars in Dr. Pierce's pamphlet treatise on Diseases Peculiar to Women, 95 pages, sent for three stamps. Address World's Dispensary Medical Association, Buffalo, N.Y.

Preserving Wood Against Decay.

It has long been known that wood set in mortar is preserved against decay, and many stories have been told of the lasting qualities of wood which have come in contact with this substance. A naval journal stated recently that a lime-laden coasting schooner of unseasoned Maine timber, which went ashore and bilged 40 years ago, was raised some time after and is still in service; and an English paper gives the history of a platform of nine planks which have been used successfully by father, son and grandson for mixing mortar, was then thrown aside and allowed to be overgrown with grass, but when brought to light again sixty years after, was found to be still in a state of preservation. Strangely no systematic attemps to utilize the knowledge has hitherto been man, and now a method based on this principle has been devised in France, and is simple, cheap, requiring no special apparatus, and also effective. The plan is to pile the planks in a tank and to put over all a layer of quicklime, which is gradually slacked with water. The time required depends, of course, on the thickness of the wood. Timber for mines will be thoroughly impregnated in about a week, The material is said to acquire remarkable consistency and hardness after this

SOPHIA, sentimentally: "I dearly love to listen to the ticking of a clock. It seems to me that a clock has a language of its own," Mr. Smart: "Yes, Sophia, the clock has a language-you might sav. a dial-ect.'

Dr. Pience's "Pellets"-little liver pills (sugar-coated)—purify the blood, speedily correct all desorders of the liver, stomach and bowels. By druggists.

"Don't Know Half Their Value." "They cured me of Ague, Bilionsness and Kidney Complaint, as recommended. I had a half-bottle left which I used for my two little girls, who the doctors and neighbors said could not be cared. I would have lost both of them one night if I had not given them Hop Bitters. They did them so much good I continued their use until they were cured. That is why I say you do not know half the value of Hop Betters. and do not recommend them high enough."-B., Rochester, N. Y.
